

ABS Wavesight™ Nautical Systems

Practical Application Case Study

Inventory Control

Challenge

The client was unable to reconcile inventory and identify potential loss of spare parts and the associated costs.

Solution

Nautical Systems' Maintenance Manager and Purchasing Manager modules.

The NS Maintenance and Purchasing modules provide unified management of marine procurement and inventory control activities to deliver an efficient, cost-effective and compliant marine procurement process. Our software solution allowed the client to identify at which point in the supply chain critical inventory errors occurred. This allowed for additional controls to be put in place that were deployed through Nautical Systems.

Results

The identification of procedural inefficiencies led to the development of an optimized spare parts program deployed through Nautical Systems, which resulted in an annual cost savings in excess of US\$3 million.
